

## OVERVIEW:

WebShot is a web content editing and administration system for new or existing Web Sites that will allow users to interactively make instant changes to any web page and the database. Its high level of security features are managed by a Super-user Admin Mode who can enable or disable web areas for editing by groups or by person. It eliminates expensive maintenance costs.

## MAIN FEATURES:

- Can be added to any existing web site.
- Ideal where access to editing web information is controlled by a Web administrator.
- Each Web page can have its own user permission settings by groups or individual access.
- No expert skills are required on how to change a web page.
- Database driven for managing structure data related to product prices, data links, hot sales, new items and many other sales, marketing and service promotions.
- Changes can made from any PC without any add on tools.
- In Admin Mode the browser window becomes a word processor.

## SPECIFICATION:

Internet connection  
PC running Windows 98/XP/NT/2000.

## HOW CAN IT BE INSTALLED:

- WebShot can be installed on your ISP(Internet Service Provider).
- Installation is simple and straight forward.

## A WAY TO IMPROVE YOUR BUSINESS:

- With WebShot you are in control of your web site to keep it fresh and meaningful.
- Webshot encourages customers to look at your web site because the information they are looking for is up to date and relevant.

## HOW DOES WEBSHOT WORK:

- Simply log on by user name and password to activate the Admin mode.
- In Admin mode your web site still looks the same but additional activation edit features appear.
- Simply navigate to page or area of interest and change the content. It works like a word processor.
- Practically any image or text can be changed on-line and is immediately visible on the Internet.
- With Webshot you can create your own pages and links with the simplest of ease.

## BROAD BUSINESS APPLICATION:

- E-commerce, product sales.
- Education department.
- CAD on the web applications.
- Documents management on the web.
- Corporate and Community web sites.

## SECURITY AND WEB ACCESS ENabler:

This is a unique feature of WebShot. The super administrator has full control of who can gain access and make changes to certain part of the web site. As a first step users and groups are created and then these entities are assigned permission levels to pages. (see Page Enabler). Any combination of page permission level is possible. For example a user may have extended permission by belonging to one or more groups.

## PAGE ENabler:

- This function allows to enable and disable pages by profile and other specific web features for content editing by user and groups.
